SECTION -D		
9	<p>Energy is required for all activities. It is needed to cook, to provide light and heat, to propel vehicles and to drive machinery in industries. Energy can be generated from fuel minerals like coal, petroleum, natural gas, uranium and from electricity. Energy resources can be classified as conventional and non-conventional sources. Conventional sources include: firewood, cattle dung cake, coal, petroleum, natural gas and electricity (both hydel and thermal). Non-conventional sources include solar, wind, tidal, geothermal, biogas and atomic energy. Firewood and cattle dung cake are most common in rural India. According to one estimate more than 70 percent energy requirement in rural households is met by these two; continuation of these is increasingly becoming difficult due to decreasing forest area. Moreover, using dung cake too is being discouraged because it consumes most valuable manure which could be used in agriculture.</p> <p>(i) Which of the following statement is true about conventional energy resources? (a) They cause minimum pollution. (b) They are available in limited quantity. (c) Cattle dung is the most used energy in the world. (d) There are sufficient reserves of conventional energy sources.</p> <p>(ii) Which of the following resources generate energy? (a) Coal (b) Fuel (c) Natural gas (d) All of the above</p> <p>(iii) Which of the following energy is non-conventional source of energy? (a) Firewood (b) Tidal energy (c) Natural gas (d) Petroleum</p>	3
