

Grade 5 EVS – Question Bank

Regions of the World

Answer the Following

1. Into how many heat zones is the Earth broadly divided?
 2. Name the three main heat zones of the Earth.
 3. Which heat zone is known for receiving the most heat?
 4. What is another name for the hot and wet equatorial region?
 5. Which region is characterized by extremely low temperatures year-round?
 6. What type of climate is found in the temperate grassland region?
 7. Describe the climate of the hot desert region.
 8. What are the main characteristics of the torrid zone?
 9. Which heat zone includes regions with moderate temperatures?
 10. What kind of wildlife is typical of the polar region?
 11. How does the climate of the temperate zone differ from the torrid zone?
 12. What type of vegetation is common in the hot desert region?
 13. Which zone includes the Arctic and Antarctic regions?
 14. How do human activities differ in the frigid zone compared to the torrid zone?
 15. What type of climate challenges do people face in the equatorial region?
 16. What is a key characteristic of the temperate grassland region's climate?
 17. Which climatic region is known for having distinct wet and dry seasons?
 18. Describe the typical weather in the frigid zone.
 19. What is the main challenge for wildlife in the hot desert region?
 20. How does human life adapt to the climate in the polar region?
-
1. Explain the characteristics of the torrid zone and its impact on climate and life.
 2. Describe the climate and environmental conditions of the temperate zone.
 3. Discuss the unique features of the frigid zone and its impact on human and wildlife.
 4. What are the climatic characteristics of the hot and wet equatorial region?
 5. Describe the major climate challenges faced in the hot desert region.
 6. Explain the importance of the temperate grassland region for agriculture.
 7. Discuss the adaptation strategies of wildlife in the polar region.
 8. How do human activities vary across the different heat zones?
 9. Describe the vegetation and wildlife found in the equatorial region.

10. What are the major differences between the climate of the temperate zone and the frigid zone?
11. Explain how the torrid zone affects global weather patterns.
12. Discuss the impact of climate on human life and activities in the temperate grassland region.
13. Describe the survival strategies of plants and animals in the hot desert region.
14. What are the main climatic differences between the temperate zone and the torrid zone?
15. Explain how climatic regions within the heat zones can vary greatly.
16. Discuss the role of the frigid zone in Earth's overall climate system.
17. Describe the impact of extreme temperatures on human life in the frigid zone.
18. How do climatic conditions in the equatorial region support biodiversity?
19. What are the main challenges faced by human populations living in the hot desert region?
20. Explain how climate change might impact the different heat zones of the Earth.
