Question 9. What are electrophiles and nucleophiles? Explain with examples:

Answer: Electrophiles: The name electrophiles means electron loving. Electrophiles are electron deficient. They may be positive ions or neutral molecules.

Ex: H^+ , Cl^+ , Br^+ , NO_2^+ , R_3C^+ , RN_2^+ , $AlCl_3$, BF_3

Nucleophiles: The name nucleophiles means 'nucleus loving' and indicates that it attacks the region of low electron density (positive centres) in a substrate molecule. They are electron rich they may be negative ions or neutral molecules.

Ex: Cl^- , Br^- , CN^- , OH^- , R_2CR^- , NH_3 , RNH_2 , H_2O , ROH etc.

Question 10. Explain the terms inductive and electromeric effects. Which electron displacement effect explain the following correct orders of acidity of the carboxylic acids?

(a) $Cl_3CCOOH > Cl_2CHCOOH > ClCH_2COOH$

(b) $CH_3CH_2COOH > (CH_3)_2CHCOOH > (CH_3)_3CCOOH$

Answer: Inductive Effect: The inductive effect refers to the polarity produced in a molecule as a result of higher electronegativity of one atom compared to another. Atoms or groups which lose electron towards a carbon atom are said to have +I Effect.

Those atoms or groups which draw electron away from a carbon atom are said to have -I Effect.

Common examples of -I effect are:

NO_2 , F , Cl , Br , I , OH etc.

Examples of +I effect are (Electron releasing)

$(CH_3)_2C-$, $(CH_3)_2CH-$, CH_3CH_2- , CH_3- etc.

Electromeric effect: The electromeric effect refers to the polarity produced in a multiple bonded compound as it is approached by a reagent.

The atom A has lost its share in the electron pair and B has gained this share.

As a result A acquires a positive charge and B a negative charge. It is a temporary effect and takes place only in the presence of a reagent.

(a) -I-effect as shown below:

As the number of halogen atoms decreases, the overall -I- effect decreases

and the acid strength decreases accordingly.

(b) +I-effect as shown below:

As the number of alkyl groups increases, the +I-effect increases and the acid strength decreases accordingly.
