

WORKSHEET

Geography -Chapter -4

Mineral and power resources

A: Fill in the Blanks

1. Minerals are naturally occurring _____ found in the earth's crust.
2. _____ are substances that provide energy, such as coal, oil, and natural gas.
3. The process of extracting minerals from the earth is called _____
4. The two types of minerals are _____ and _____
5. Renewable energy sources include _____ and _____

B: Multiple Choice Questions

6. Which of the following is a non-metallic mineral?
 - A) Iron
 - B) Gold
 - C) Coal
 - D) Salt
7. Which mineral is commonly used for construction purposes?
 - A) Diamond

- B) Gypsum
- C) Silver
- D) Copper

8. Which fossil fuel is primarily used for electricity generation?

- A) Coal
- B) Oil
- C) Natural gas
- D) Uranium

9. Which of the following is not a renewable energy source?

- A) Solar power
- B) Wind power
- C) Coal
- D) Hydroelectric power

10. Which mineral is commonly used for making jewelry?

- A) Iron
- B) Diamond
- C) Coal
- D) Copper

C: Write True or False

11. Minerals are evenly distributed across the earth's crust. (True/False)

12. Fossil fuels are a finite resource. (True/False)

13. Renewable energy sources are environmentally friendly. (True/False)

14. Hydroelectric power is generated by harnessing the energy of water.
(True/False)

15. Metallic minerals are used primarily for fuel production. (True/False)
